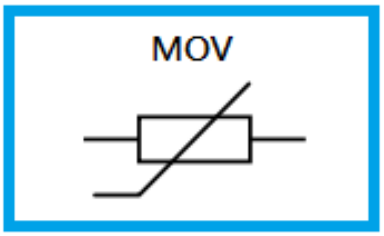
PVR20D Series MOV Devices

Features

- Wide operating voltages ranging from 10 V_{RMS} to 1000 V_{RMS} (14 V_{DC} to 1465 V_{DC}).
- Fast response time of less than 25 ns, instantly clamping the transient over voltage.
- High surge current handling capability.
- High energy absorption capability.
- Low clamping voltages, providing better surge protection.
- Low capacitance values, providing digital switching circuitry protection.
- High insulation resistance, preventing electric arcing to the adjacent devices or circuits.



Applications

- Transistor, diode, IC, thyristor or triac semiconductor protection.
- Surge protection in consumer electronics.
- Surge protection in industrial electronics.
- Surge protection in electronic home appliances, gas and petroleum appliances.
- Relay and electromagnetic valve surge absorption.

Agency Approval

- UL file no.: E474915
- VDE file no.: 40028836
- CQC file no.: 12001078540 and 19001211516

General Characteristics Definition

- Operating temperature: -40 ~ 85°C
- Storage temperature: -40 ~ 125°C
- Working surface temperature: 115°C
- Insulation resistance: >100 MΩ
- Coating (Epoxy resin): Flame-Retardant to UL 94 V-0

Material

- Coating: Epoxy resin
- Lead wire: Tin plated copper
- Electrode: Silver solder
- Disk: Zinc oxide

Part Number Code

PVR 20 D □□□ □ □ - □ □

- Bulk or taping (B: Bulk; A: Ammo; R: Reel)
- Lead Form (S: Straight; C: Crimped)
- High surge & high energy (J: High surge; Blank: Standard)
- Tolerance of varistor voltage (K: ±10%; L: ±15%; M: ±20%)
- Varistor voltage
- Disc type device
- Chip Diameter (20: 20 mm)
- PolyTrans Varistor

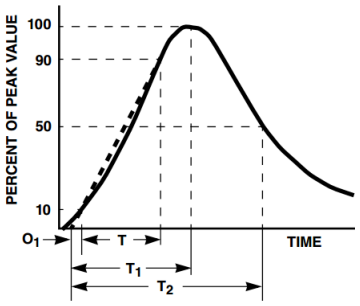
Peak Pulse Current Test Waveform



O_1 = Virtual Origin of Wave
T = Time from 10% to 90% of Peak
T1 = Rise Time = 1.25 x T
T2 = Decay Time

Example – For an 8/20 μs current waveform
8 μs = T1 = Rise Time
20 μs = T2 = Decay Time

Reliability Test

Mechanical Ratings		
Test Parameter	**Test Condition / Description**	**Performance Requirements**
Terminal Pull Strength	After gradually applying the load specified bellow and keeping the unit fixed for ten seconds, the terminal shall be visually examined for any damage. Diameter / Loading 0.6 mm / 1.0 kg 0.8 mm / 1.0 kg 1.0 mm / 2.0 kg	No visible damage
Terminal Bending Strength	The unit shall be secured with its terminal kept vertical and the weight specified below be applied in axial direction. The terminal shall gradually be bent by 90° in one direction, then 90° in the opposite direction, and again back to the original position. The damage of the terminal shall be visually examined. Diameter / Loading 0.6 mm / 0.5 kg 0.8 mm / 0.5 kg 1.0 mm / 1.0 kg	No visible damage
Vibration	The specimen shall be vibrated by its lead wires with a total amplitude of 1.5 mm and a varying frequency of 10~55~10Hz (each minutes) for a period of 2 hours respectively in each X, Y and Z directions.	No Visible damage $\Delta V_b/V_b \leqq 5\%$
Solderability	After dipping the terminal the depth of approximately 3 mm from the specimen in a soldering bath of 260°C for 10±1 (D5: 5±1) seconds. Thereafter the terminal shall be visually examined.	Terminations shall be uniformly covered by solder
Resistance to solder heat	After preheating the specimen, the specimen shall be completely immersed into a soldering bath having a temperature of 260±5°C for 10±1 (D5: 5±1) seconds or iron of 400±5°C for 3±0.5 seconds. Thereafter the change of V_b and mechanical damage shall be examined.	No Visible damage $\Delta V_b/V_b \leqq 5\%$
Environmental Ratings		
Test Parameter	**Test Condition / Description**	**Performance Requirements**
Dry Heat Loading	The specimen shall be applied continuously the maximum allowable voltage at the specified conditions for specified period and then stored at room temperature and normal humidity over 2 hours. Thereafter, the change of V_b and mechanical damage shall be examined. Ambient temp: 125±2°C / Period: 1000±24hours	$\Delta V_b/V_b \leqq 10\%$
High Temp Storage	In a dry oven without load. Ambient temp: 125±2°C / Period: 1000±24hours	$\Delta V_b/V_b \leqq 5\%$
Damp Heat Loading	The specimen shall be applied continuously the maximum allowable voltage at the specified conditions for specified period and then stored at room temperature and normal humidity over 2 hours. Thereafter, the change of V_b and mechanical damage shall be examined. Ambient temp: 40±2°C, 90~95%RH / Period: 1000±24hours	$\Delta V_b/V_b \leqq 10\%$
Temperature Cycle	Condition the specimen to each temperature from step 1 to step 4 in this order for the period shown in the table of specifications. The change of V_b and mechanical damage shall be examined after 2 hours. Step 1 / -40±3°C / 30min. Step 2 / Room temp / 15min. Step 3 / 85±2°C / 30min. Step 4 / Room temp / 15min.	No Visible damage $\Delta V_b/V_b \leqq 10\%$
Surge Lifetime Rating	The change of Vb shall be measured after the impulse listed below is applied 10,000 times continuously with the interval of ten seconds at room temperature.	No Visible damage $\Delta V_b/V_b \leqq 10\%$
Voltage Proof	Voltage: 2500 Vac / Leakage current≦0.5 mA / Time: 60 seconds	No Breakdown
