

Thyristor Surge Suppressor (TSS) – S Series

Description

DO-214AA PXXXX S series solid state protection thyristor protect telecommunication equipments such as modem, line cards, fax machines and other CPE. PXXXX S series devices are used to enable equipment to meet various regulatory requirements including GR 1089, ITU K.20, K.21 and K.45, IEC 60950, UL 60950 and TIA-968 (formerly known as FCC Part 68)

Electrical Parameters

Compared to surge suppression using other technologies, PXXXX S series devices offer absolute surge protection regardless of the surge current available and the rate of applied voltage (dv/dt).

P series devices:

- Cannot be damaged by voltage
- Eliminate hysteresis and heat dissipation typically found with clamping devices.
- Eliminate voltage overshoot caused by fast-rising transients
- Are non-degenerative.
- Will not fatigue
- Have low capacitance, making them ideal for high-speed transmission equipment.

Thermal Considerations

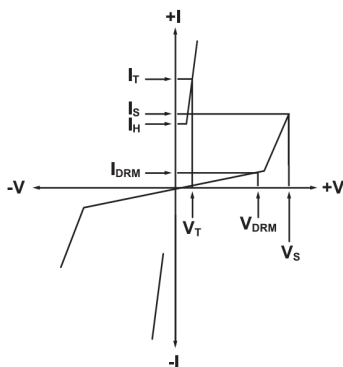

- T_J – Operating Junction Temperature Range: -40~150°C
- T_S – Storage Temperature Range: -40~150°C
- $R_{\theta JA}$ – Thermal Resistance: Junction to Ambient: 90°C/W
